

## Fast, furious...and hands free. Superior firefighter bailout and more.

For reliable and completely HANDS FREE bailout – all the way out and all the way down

Designed for and tested by firefighters, the DEUS FB31 Firefighter Bailout & Rescue Kit provides the fastest, safest, easiest way to get out of a jam, completely HANDS FREE. The kit is built around the DEUS 3100 controlled descent device, and includes 7.5 mm fire-resistant rope, a carry & deploy system, and connectors.

### The DEUS 3100

This NFPA-certified bailout system is the only one to operate entirely hands-free “stop” or “go.” It has four redundant brakes, with speed-limiting technology to guard against free-fall.

The 3100 works for bailout or rescue. Connect it to your harness, and you are in complete control of your own descent. Rig it to an anchor and use it to rescue others. Plus, the 3100 is reversible without re-rigging, so multiple people can descend, one after another, on a single rope.

### DEUS 7.5 mm Rope

DEUS 7.5 mm Fire-Resistant Rope was designed expressly for the 3100, and it is the only rope certified for use with this system. This NFPA-certified technical kernmantle rope has a tough polyester sheath and a Technora core.

### Carry & Deploy Options

Your DEUS 3100 and rope are easy to stow, completely pre-rigged and ready to deploy instantly, thanks to the two available DEUS Carry & Deploy Systems.

The kit comes standard with the DEUS Pequa Pouch, containing the entire Bailout Kit in a package designed to fit in a front pants pocket. Or, upgrade to the DEUS Z3 System, a three-part field strippable bag, including a lumbar rope bag, holster and connecting gooseneck that attach to your harness or belt.

Choose the DEUS Pequa Pouch or upgrade to the innovative Z3 Carry & Deploy System.

When lives are on the line, trust DEUS Rescue.
