

RTU KITS

## Give lifting a lift.

Better solutions for lifting and hauling.

Each DEUS RTU (Rescue Transfer Unit) includes a set of pre-rigged compound pulleys and accessories that makes lifting and hauling a breeze.

DEUS RTU Kits provide compact, lightweight and easy to use solutions for lifting and hauling. Choose between the DEUS RTU with the Aztek pulley system, or the CMI pulley system. Either way, you can rig for 4:1, 5:1 or 10:1 mechanical advantage so lifting even heavy loads is nearly effortless.

### Advantage DEUS

With a DEUS RTU Kit, lifting can be accomplished more quickly and with less effort compared to handle-wheel systems. And because the DEUS RTU operates independently of your controlled descent system, you have more flexibility in rigging, and can use it in more situations.

### Choice of Pulleys

Whether you prefer a compound pulley system with prusiks for progress capture or a mechanical cam, DEUS offers an RTU for you. The DEUS GX01 RTU Kit with Aztek includes prusiks, and

integrated swivels on each end of the pulley set to aid rigging. The DEUS GX02 RTU Kit with CMI provides pulley sets with a mechanical cam that is released with a short lanyard.

The compound pulleys in both kits are pre-rigged with DEUS 7.5 mm Liberty Blue rope. By rigging with certified technical rope, the RTU can be rigged in "series" or in "parallel" with a controlled descent device, for simpler, faster rescues.

### Available Edge Restraint

The DEUS Edge-Restraint System can be added to your RTU kit for a simple, elegant and effective solution for working near dangerous edges during rescue.

The DEUS RTU Kit is available with a DEUS Edge Restraint addition, accessible from the bottom of the double-ended bag.

When lives are on the line, trust DEUS Rescue.
