

Get away hands free.

Safe, simple and lightweight personal escape.

The DEUS GE33 Tower Escape Kit provides the tools for hands-free escape from high on a tower, all in a lightweight and compact kit.

For wind, electrical or utility tower technicians, or anyone who works at heights, the DEUS Tower Escape Kit is the answer for quick, easy escape, and safe, hands-free descent.

The kit is complete, pre-rigged and ready to use, and takes just seconds to deploy. Plus, at just 12 lbs (kit with 300 ft. of rope), the kit is light enough that technicians won't be tempted to leave it in the truck.

DEUS 3300

The Tower Escape Kit is built around the DEUS 3300 controlled descent device. Small enough to fit in your pocket, this innovative system operates hands free, limits speed to guard against free-fall, and has four redundant brakes for extra safety, versatility and control.

The DEUS 3300 is a "set-to-go" system, so escape doesn't involve shock load or sudden stops to manually release a brake. The 3300 uses fire-resistant DEUS 7.5 mm Escape & Rescue Rope, and the rope is replaceable in just seconds so you can carry and use different ropes for different tasks.

Everything You Need

The DEUS Tower Escape Kit comes complete with the DEUS 3300, carabiners, a DEUS ROW Lt for anchoring, and DEUS 7.5 mm Escape & Rescue Rope (specify 50, 100, 200, 300 or 350 ft.), all packed in the compact DEUS Tower Haul Bag.

When lives are on the line, trust DEUS Rescue.
