

DEUS® 7300T Back-Up Belay System

Keep the training experience both realistic AND safe.

The new DEUS 7300T provides a training-neutral back-up belay that is also easy, safe and automatic. It is the ideal safety line for training with DEUS Vertical Rescue Systems.

Designed for repetitive use, this NFPA-certified system keeps a 12 mm DEUS Training Belay rope active at all times, yet completely out of the way. No tug on the back from an improperly attended belay line. If descent speed exceeds 2 meters per second, the 7300T instantly and automatically engages to guard against free fall. The 7300T does a "soft engagement" to prevent shock load and injury.

Now you can experiment with and perfect standard operating procedures for bailout, evacuation and rescue with confidence, knowing that back-up belay is automatic and done right. Because rope runs through the 7300T reversibly without re-rigging, back-to-back evolutions are fast, easy and foolproof.

The DEUS 7300T is a highly flexible system too. Rig to a high anchor to support multiple sequential descents without re-rigging. Rig the system to an anchor on the ground, running the belay line through a high-anchor pulley, if you want to control descent via the free end of the rope.

Purchase a complete flexible-component kit from DEUS Rescue to set up a safe, simple and smooth-running back-up belay system, or purchase just the DEUS 7300T and 12 mm DEUS Training Belay rope to build your own back-up belay system. (See page 2 for kit components.)

NOTE the DEUS 7300T is certified for use ONLY with DEUS Training Belay Rope (sold separately).

Sold as part of a complete "flexible kit."
See page 2 for details.

DEUS 7300T Backup Belay System and components:

BACKUP BELAY SYSTEM

DEUS 7300T Backup Belay System – NFPA “L” certified (Patented)

ROPE

DEUS Training Belay Rope
12 mm, kernmantle construction, NFPA “L” certified for use with DEUS 7300T
(Specify length)
