

# DEUS™ 7500 Challenge Course Belay System

Safer, easier and a lot more fun.

Challenge course participants want challenge that is fun and builds self-confidence, without fear or risk of serious injury, and without waiting in line too long for their turn.

The DEUS 7500 Challenge Course Belay System can help. It gives users a reliable safety line, providing simple and reliable controlled descent when needed, automatically. This makes the DEUS 7500 ideal for challenge courses in two ways:

- It is a superior belay system for use on high elements. It is far safer than other belay systems because it operates automatically. And it provides a much more comfortable ride because it absorbs painful shock.
- It provides the foundation for an exciting new element, allowing participants to experience the thrill of BASE jumping with less risk.

The DEUS 7500 is built around a direct-drive centrifugal brake that limits descent speed to a safe 2 meters/second – the equivalent of jumping off an 8" step. More fun, less risk of injury.

The DEUS 7500 operates in either direction, so one person after another can descend quickly – no waiting in line while the element is re-rigged. After each person descends, it takes only seconds to attach the next person to the free end of the rope and go. More fun, less waiting.

The anodized aluminum, stainless steel and brass construction of the DEUS 7500 means it is built for all-day, every day use, rain or shine. And it engages automatically so it takes less manpower and less skill to manage climbing and descent elements.

When lives are on the line, trust DEUS Rescue.
