

For use with

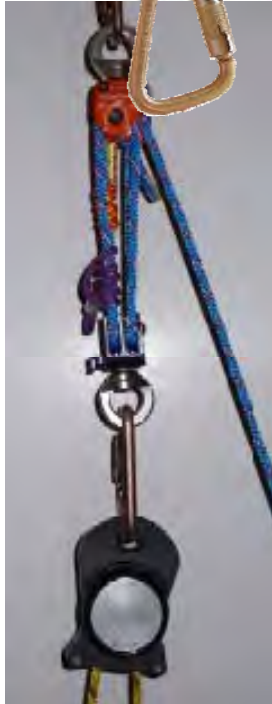

DEUS™
Vertical Rescue Systems

DEUS™ RTU Kits with AZTEK

Your DEUS Vertical Rescue System and the AZTEK system join forces for a complete, and completely improved, lift-and-lower rescue solution.

Featuring the
AZTEK System
Fully assembled and
ready to use.

Note that safe and effective use of DEUS RTU Kits requires professional training from a DEUS Certified Trainer.

By combining your DEUS Vertical Rescue System with a DEUS RTU (Rescue Transfer Unit) Kit, you get a complete, simple, safe and versatile lift-and-lower rescue solution that is also compact and lightweight.

The DEUS RTU Kit gets you up, and the DEUS Vertical Rescue System gets you down. Together, you have the tools for a wide range of rescue situations, including quick and reliable lift-and-lower rescue, over-the-edge rescue, long-lift, suspended cross-haul and confined space rescue.

The DEUS RTU Kit with AZTEK is built around a fully-assembled AZTEK system, from Rock Exotica, an extraordinarily efficient, versatile and easy-to-use hoist. The AZTEK is combined with DEUS NFPA-certified technical rescue rope and a variety of other accessories. Using NFPA-rated rope with the AZTEK means your DEUS RTU Kit with AZTEK can be safely rigged in series or in parallel with other equipment, making rescues easier and faster.

The AZTEK system combines two Omni-block Elite pulleys with two integrated prusiks for progress capture. Standard rigging is 4:1 mechanical advantage, but with the DEUS RTU Kit with AZTEK, it's easy to rig for 5:1 or even 10:1 mechanical advantage. (See page 2 for different rigging configurations of the DEUS RTU Kit with AZTEK.)

The DEUS RTU Kit with AZTEK is available in two configurations. One kit is for lifting and hauling, and one provides additional accessories to accommodate edge restraint. (See page 2 for more details.)

DEUS™ RTU Kit with AZTEK Components:

DEUS RTU KIT WITH AZTEK – FOR LIFT/HAUL (PART # K-AZTRTU001)

- | | | | |
