

## GA02 FREESTANDING ANCHOR KIT

## Evacuation station. A complete, portable anchor platform.

With the DEUS GA02 Freestanding Anchor Kit, getting people out and down during evacuation is faster, safer and easier than ever.

The DEUS Freestanding Anchor is a complete, engineered anchor platform for high rescue. It sets up virtually anywhere in minutes, providing a stable A-frame design to serve as a safe, reliable overhead anchor.

### Get Set Quickly

The DEUS Freestanding Anchor packs up into three large bags that store easily on site. In an evacuation emergency, the entire system sets up anywhere in less than four minutes.

The parts of the Freestanding Anchor slide together and lock in place with double quick locks. Anchor height is adjustable from 45" to 113".

### Transition to Go

The built-in trolley dramatically improves transition – rig people inside, then glide them easily over the edge for descent. The trolley rolls across the entire length of a 10 ft. high beam on four redundant wheels. The cantilever extends over the edge by 3 ft., protecting rope and people, and eliminating excess rope friction.

### Descent

The DEUS Freestanding Anchor Kit is designed to work with DEUS Controlled Descent Devices. The DEUS 7000 Series is designed for evacuation of multiple people one-at-a-time, over vertical distances of more than 300 ft. The 3000 Series is designed for evacuation of one or two people over vertical distances of 300 ft. or less.

When lives are on the line, trust DEUS Rescue.
