

## Keeps safety simple.

Escape with minimal training, maximum safety.

The DEUS IE37 Industrial Escape Kit gives industrial and commercial workers a safe and simple way down when things go wrong.

With this kit, escape is just "2 clips and go".

The DEUS Industrial Escape Kit sets a new standard in keeping safety simple. It's built around the DEUS 3700, a safe and reliable controlled descent device that is also easy to use, even under duress and with minimal training. The kit is pre-rigged and ready to use.

### The DEUS 3700

This descent system has been third-party tested and certified to the ANSI Z359 standard for descents up to 500 ft. It operates automatically and hands free. Just connect one end of the rope to your harness, the other end to an anchor, step over the edge and go. The 3700 has four redundant brakes working together to limit your speed to a safe 2 M/second maximum, and to guard against free-fall.

The DEUS 3700 is easy to operate during descent, with an integrated control knob. And because it's fully reversible, it's easy to save yourself or others without re-rigging. The 3700 is lightweight, compact and built tough.

### DEUS 7.5 mm Rope

The DEUS 3700 works only with DEUS 7.5 mm Escape & Rescue Rope. This NFPA-certified technical kernmantle rope has a tough polyester sheath and a Technora core that is fire-resistant to 932°F. It's also lightweight and easy to work with.

### A Complete Kit

The DEUS Industrial Escape Kit is a complete kit, including the DEUS 3700, DEUS 7.5 mm Escape & Rescue Rope and connectors, pre-rigged and packed in a sturdy, water-resistant haul bag.

When lives are on the line, trust DEUS Rescue.
