

Saves lives...and time.

The right tools for rapid rescue.

The DEUS FR31 Rapid Response Kit provides the tools for vertical rescue in a compact, lightweight, full-featured kit that's made to set up and use in a hurry.

Created for firefighter rescue teams (FAST/RIT/RIC), this kit addresses three specialized functions: controlled descent, anchoring, and lift-and-lower. Together, you have a complete solution, all packed in a special two-part carry bag for faster rigging.

Controlled Descent

The Rapid Response Kit is built around the DEUS 3100, the ultimate controlled descent device for rapid evacuation or rescue. The 3100 operates hands-free "stop" or "go", and has four redundant brakes with speed limiting technology to guard against free fall. Carry it pre-rigged so it can be deployed in seconds. It includes 100 ft of DEUS 7.5 mm fire- and cut-resistant rope.

Anchoring

Rigging with conventional anchors can take precious time. The Rapid Response Kit includes a DEUS Quik-Set Anchor Kit, a fast, versatile and easy anchoring solution that sets in seconds. The

Quik-Set Anchor is one-hand adjustable to any length up to 25 ft., and requires no knot tying or edge protection.

Lift-and-Lower

The Rapid Response kit includes the DEUS RTU (Rescue Transfer Unit), a complete lifting and hauling solution. The RTU has a compact pulley system for 4:1 or 5:1 mechanical advantage to support short or long lifts, and an integrated edge-restraint system to prevent falls.

Packed for Speed

All of the gear in the DEUS Rapid Response Kit is packed in our innovative Carry/Deploy bag. This compact, two-part bag makes rigging for evacuation or rescue extra fast and easy. Its two parts separate so one person can rig the anchors while another prepares for descent or lifting.

The DEUS FR31 Rapid Response Kit includes everything for rapid rescue, in a convenient 2-part Carry/Deploy bag.

When lives are on the line, trust DEUS Rescue.
