

## A little bundle of bam!

The tools for every kind of rescue.

The DEUS GR33 Tower Escape & Rescue Kit gives you the tools to handle any tower emergency, all in a single lightweight kit.

The DEUS Tower Escape & Rescue Kit combines the DEUS 3300 controlled descent device with the DEUS RTU lifting and hauling kit and other accessories to support almost any type of rescue.

For professionals who work on wind, electrical or utility towers or other high structures, this kit provides the tools for personal escape, rapid sequential bailouts, rescue after a fall, confined space rescue and more. And it's all packed into a small kit lightweight enough to carry with you.

### DEUS 3300

The DEUS 3300 provides safe, reliable descent. It's small, operates completely hands free, can be "set to go" or "set to stop", limits speed to guard against free-fall, and has four redundant brakes for extra safety, versatility and control.

### DEUS RTU

The DEUS RTU (Rescue Transfer Unit) is a simple and compact lifting and hauling solution. Packed in its own double-ended bag, the DEUS RTU includes a set of pulleys with 4:1 mechanical advantage, pre-rigged with DEUS 7.5 mm NFPA-certified rope, progress-capture prusiks and auto-lock carabiners.

### Everything You Need

In addition to the DEUS 3300 and DEUS RTU, the kit includes DEUS 7.5 mm Escape & Rescue Rope (specify length), a DEUS Edge Pro deluxe edge protector, two DEUS ROW Anchor Chokers, and connectors.

The DEUS Tower Escape & Rescue Kit packs in a compact carry bag. Or upgrade to the watertight DEUS Escape & Rescue Hard Case.

When lives are on the line, trust DEUS Rescue.
