

Slow and easy. For gentle landings from zip-lines.

The DEUS CX755 gently and reliably slows guests' speed as they approach landing stations, with smooth, shock-free braking.

With the DEUS Zip-Line Brake Kit, zip-line and canopy tour operators have a simple, reliable method for ensuring that guests hit landing stations at just the right speed, without the need for continuously tuning the line.

DEUS 7550

The DEUS Zip-Line Brake Kit is built around the DEUS 7550, an automatic braking system designed to gently slow guests as they reach the end of the zip line. The system is field adjustable by a trained technician so speed and engagement parameters can be customized to each landing area.

The 7550 is built for safety, reliability and long life. It includes four redundant brakes to control descent speed and guard against free fall. And the exclusive DEUS "Soft Engagement Technology" helps manage and absorb shock load.

Uses DEUS 12 mm Rope

The DEUS Zip-Line Brake Kit includes DEUS 12 mm Rope, the only rope certified to work with the DEUS 7550 brake system.

Constructed of polyester over nylon, our 12 mm technical kernmantle rope is durable, super strong, easy to work with and NFPA certified. It's available in custom lengths up to 500 ft., in black or white.

When lives are on the line, trust DEUS Rescue.
